Sample collection

Collect about half a liter of sample and describe briefly where in the reactor the sample was collected (from the top, from the side etc).

Sending the sample

Pack the sample in an appropriate container and send it as a letter or through your local courier service. If you are sending the sample from outside EU, certain countries may require a custom declaration. Ask your local courier service for advice.

Enclose a printout of this document in the package with the sample. Please notify us by email (info@stonemill.se) when you have sent it.

We charge EUR 600/sample for pilot testing and EUR 500/sample for analysis, if required.
